MARCO TECHNOLOGIES

AI PROJECT MANAGER · FOR TRADE CONTRACTORS

Meet Olivia.

Eva wins the bid.
Olivia plans the work.

She turns won bids into projects, tracks tasks and milestones, and shows whether your crew has the hours.

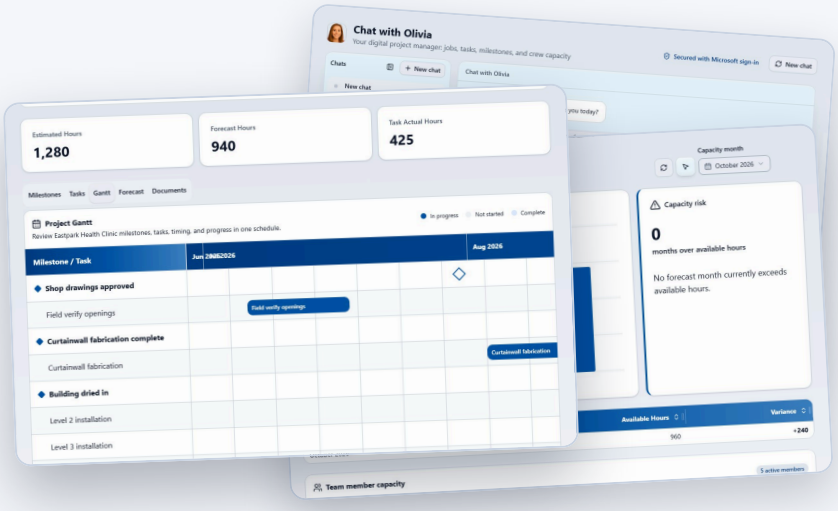

AFTER THE WIN

Win to build.

A won pursuit becomes a project with its milestones carried over. Tasks, timeline and install hours stay in one place.

You: "Are we over capacity?"
Olivia: "No month exceeds available hours."

What Olivia does

01 Picks up the win
Won pursuits become projects, with their milestones carried over.

02 Plans the work
Projects, milestones and tasks, kept together in one plan.

03 Shows the timeline
A Gantt view of every project and its milestones.

04 Forecasts install hours
Monthly install-hour forecasts across your projects.

05 Watches crew capacity
Team capacity measured against 160-hour months, so overloads show early.

06 Answers where you work
Ask in the app, in Microsoft Teams or in Copilot.

Just ask Olivia

- "What's on my plate this week?"
- "Which of my tasks are overdue or blocked?"
- "Are we over capacity in the next three months?"
- "Which milestones are at risk?"

Runs in your Microsoft 365, secured with Microsoft sign-in.
No third-party platform. Set up and managed by Marco Technologies.
